

**INDIVIDUAL DEVELOPMENT
ROADMAP**

Alberto Antonio Carvalho Cabral Adao

Digital Operations, Process Optimisation and PropTech Transformation

Provisional placement

Digital Transformation Practitioner - Business Operations and Process Optimisation. Primary pathway: integrated property operations, data-driven decision-making and low-code automation. Secondary pathway: digital product leadership and PropTech entrepreneurship.

Prepared for	Alberto Antonio Carvalho Cabral Adao
Prepared by	Skunkworks Academy - Training and Career Development
Assessment source	Prior Career Growth and Learning Programme record and property-transformation discovery context
Report date	16 July 2026
Review period	12 months, with 30/60/90-day checkpoints
Contact	To be confirmed during IDR validation consultation

Purpose

This Individual Development Roadmap converts the available assessment and business-discovery evidence into a sequenced plan for digital operations, cloud and data fundamentals, process automation, portfolio development, leadership growth and measurable transformation outcomes.

Assessment interpretation note

The original full assessment response set was not available in the current workspace. This roadmap therefore uses the previously documented participant-31 summary, the confirmed digital-factory/process-optimisation direction, and the property-operation capability profile. Personal details, current role, learning time and credential history must be validated at the first consultation.

CONFIDENTIAL - Contains personal and business-development information supplied for career planning.

01 Executive Development Summary

This roadmap positions Alberto to move from fragmented, tool-based property operations toward an integrated digital operating model. The development emphasis is not software engineering for its own sake; it is the ability to diagnose operational friction, map processes, establish trustworthy data, configure practical automation, measure outcomes and lead a controlled transformation programme.

One-year North Star

By July 2027, Alberto should be able to lead a controlled property-operations transformation pilot, demonstrate an integrated data and workflow prototype, communicate measurable business value, and supervise implementation partners with credible cloud, automation, analytics and governance knowledge.

Development profile

Current context	Property-business operations and digital-transformation planning; exact title to be confirmed.
Primary aspiration	Build stronger digital capability, optimise property processes and establish a scalable operating model.
Confirmed technology baseline	Digital payments, BI dashboards, accounting software, property-management software, online listings, Excel/Google Sheets, WhatsApp, cloud storage and CRM.
Data readiness	Information is stored in multiple systems but is not yet integrated into one governed operating view.
Internal IT capability	Basic user support; specialist architecture, integration and governance support will be required.
Preferred delivery model	Hybrid: improve and integrate existing tools first, then introduce a custom platform where justified.
Pilot interfaces	Owner, building manager, tenant, contractor, estate agent, executive dashboard and WhatsApp interface.
Initial investment context	R75,000-R150,000 pilot range documented in the discovery profile.

02 Career Direction and Development Outcomes

- Immediate direction (0-3 months): establish a clear operating baseline, process map, data dictionary, learning routine and prioritised transformation backlog.
- Short term (3-12 months): lead a measurable pilot using dashboards, low-code workflows and integrated reporting across a representative property portfolio.
- Medium term (1-3 years): operate as a Digital Operations / Process Optimisation Lead, with responsibility for platform adoption, data governance, automation and commercial performance.
- Long term (3+ years): develop or co-lead a scalable PropTech or managed-services business that supports multiple property owners, buildings and operational teams.

03 Strengths, Evidence and Development Gaps

Current strengths and strategic assets

Strength	Evidence and development value
Operational domain exposure	The roadmap is grounded in real property workflows, stakeholder interfaces and commercial requirements rather than a hypothetical learning exercise.
Broad tool exposure	Existing use of accounting, property management, CRM, BI, cloud storage, spreadsheets, listings and digital payments provides a practical base for integration work.
Transformation ambition	The intended operating model extends beyond isolated automation toward an integrated PropTech ecosystem and scalable service capability.
Commercial context	The discovery profile includes a pilot budget and multiple possible revenue models, enabling learning to be tied directly to business outcomes.
Cross-functional orientation	The required interfaces span owners, managers, tenants, contractors, estate agents and executives, creating a strong environment for process and stakeholder leadership.
Pragmatic delivery preference	The hybrid approach reduces technology risk by improving existing tools before commissioning a custom platform.

Priority development gaps

Development gap	Required response
Integrated data model	Define authoritative data sources, entity relationships, ownership, quality rules and a reporting layer before advanced automation.
Process discipline	Document current-state and future-state workflows, decision points, controls, hand-offs, service levels and exception paths.
Cloud and platform literacy	Build enough Azure, Microsoft 365 and Google Cloud knowledge to evaluate architecture, cost, risk and implementation proposals.
Low-code automation	Develop practical capability with Power Automate, Power Apps/Pages and connectors to remove manual work safely.
Analytics and measurement	Convert operational activity into reliable KPIs for occupancy, collections, arrears, maintenance, vacancies, response times and profitability.
Governance and security	Strengthen POPIA, access control, consent, auditability, payment control, backup and vendor-governance understanding.
Portfolio evidence	Publish sanitized process maps, dashboards, prototypes, decision records and outcome reports that demonstrate applied capability.
Leadership cadence	Create disciplined stakeholder reviews, decision logs, change-management communication and accountable owners.

Development principle

Every learning activity must connect to one operational problem, one measurable outcome and one portfolio artefact. Avoid accumulating disconnected course completions without applying them to the transformation pilot.

04 Recommended Learning and Credential Pathway

Stage	Core outcomes	Timing
Stage 1 - Digital operations foundation	Process mapping, service design, data literacy, cloud concepts, security basics, stakeholder analysis and transformation governance.	0-3 months
Stage 2 - Data and workflow integration	Data dictionary, source-of-truth design, Power Query/Excel controls, Power BI modelling, connectors, automation and exception handling.	2-6 months
Stage 3 - Applied property transformation	Pilot workflows for onboarding, collections, maintenance, document control, municipal accounts and owner reporting.	5-9 months
Stage 4 - Product and operating-model leadership	Business case, roadmap, vendor governance, adoption, service levels, commercial model, scale and continuous improvement.	8-12 months

Recommended credential order

Order	Credential / assessed pathway	Why it fits	Target
1	Microsoft Azure Fundamentals (AZ-900)	Establishes cloud, architecture, service, management and governance vocabulary needed to evaluate platform decisions.	Months 1-3
2	Microsoft Power Platform Fundamentals (PL-900)	Directly supports tailored business solutions, Dataverse/connectors, low-code apps and process automation.	Months 2-4
3	Microsoft Azure AI Fundamentals (AI-901)	Builds current foundational knowledge for applying AI solutions in Azure; use AI-901 rather than the retired AI-900 exam.	Months 4-6
4	Google Cloud Digital Leader	Adds vendor-neutral digital-transformation, data, AI, infrastructure, security and operations perspective.	Months 6-8
5	Analytics pathway: Power BI or Google Data Analytics	Select one based on the pilot reporting stack; require a dashboard and written data-quality report before assessment.	Months 6-10

Order	Credential / assessed pathway	Why it fits	Target
6	Process-improvement method	Complete an applied Lean/Six Sigma or business-process-management foundation only after the first process baseline is documented.	Months 8-12

Credential rule

A credential attempt follows applied evidence. For every exam, produce at least one relevant artefact: process map, cloud decision brief, automation, dashboard, data model, risk register or implementation retrospective.

Core learning topics

Domain	Minimum capability
Process optimisation	SIPOC, current/future-state mapping, bottlenecks, root cause, controls, service levels and continuous improvement.
Data	Data dictionary, quality rules, entity relationships, reconciliation, ownership, privacy classification and KPI definitions.
Automation	Triggers, approvals, exception handling, audit logs, connectors, permissions, testing and rollback.
Cloud and integration	Identity, environments, storage, APIs, networking concepts, cost awareness, monitoring and vendor responsibilities.
Leadership	Business case, roadmap, stakeholder communication, change adoption, decision rights and benefit tracking.

05 First 90 Days: Action Plan

Period	Theme	Actions	Evidence
Days 1-30	Baseline and governance	Confirm role and available study time; map five priority processes; inventory systems and data; define KPI owners; establish project board and weekly review cadence.	Current-state maps, system register, data-source inventory, KPI dictionary, risk log and 90-day backlog.
Days 31-60	Prototype and measurement	Complete AZ-900/PL-900 learning; build one integrated dataset; produce first dashboard; automate one low-risk workflow with approvals and audit trail.	Dashboard v1, data-quality report, automation design, test evidence and user feedback.
Days 61-90	Pilot readiness	Select representative properties/processes; document future-state workflow; validate controls; complete pilot business case; present implementation recommendation.	Pilot charter, future-state map, benefits baseline, architecture sketch, implementation plan and executive presentation.

Recommended weekly cadence

Activity	Weekly target	Purpose
Structured learning	2 hours	Credential-aligned cloud, data, automation and process-improvement modules.
Applied build work	2-3 hours	Process mapping, data preparation, dashboard development and workflow prototypes.
Documentation	1 hour	Decision logs, risk updates, README files, architecture notes and benefit evidence.
Stakeholder engagement	45-60 minutes	Interview process owners, validate problems, review prototypes and record decisions.
Mentor / advisor review	45 minutes fortnightly	Technical and operational review, blockers, next actions and quality control.

Workload guardrail

Use a sustainable base of 6-8 hours per week. Business-critical operational work takes precedence. Do not run more than two active learning projects and one credential preparation stream at the same time.

First six mentor sessions

Session	Focus
1	Validate the IDR, role, weekly availability, current certifications and the five highest-value processes.
2	Review system inventory, data sources, current-state maps and baseline KPIs.
3	Review cloud and Power Platform fundamentals; approve the first low-risk automation.
4	Review dashboard model, data-quality findings, privacy classifications and access controls.
5	Review pilot charter, business case, risks, stakeholder adoption and implementation sequencing.
6	Assess 90-day evidence, select the next credential and approve the 6-12 month portfolio plan.

06 Applied Portfolio and Transformation Projects

Project	Scope	Required evidence
Project 1 - Property Operations Data Baseline	Create a governed dataset covering properties, units, tenants, leases, payments, arrears, vacancies, maintenance and key documents.	Data dictionary, source map, ownership matrix, quality report, reconciliation results and privacy classification.
Project 2 - Executive Performance Dashboard	Build an executive dashboard for occupancy, collections, arrears, vacancy days, maintenance cost, response time and portfolio performance.	Metric definitions, data model, dashboard screenshots, refresh process, access model and management interpretation.
Project 3 - Rental / Maintenance Workflow Automation	Automate one low-risk workflow such as maintenance triage, rental reminders, document approval or viewing requests.	Process map, automation design, approvals, exception path, audit evidence, user test and measured time saving.
Project 4 - PropTech Pilot Operating Model	Design the target operating model connecting existing systems, stakeholder portals, WhatsApp, reporting and governance.	Architecture diagram, RACI, service catalogue, integration map, pilot plan, cost assumptions and risk register.
Project 5 - AI-Assisted Operations Proof of Concept	Prototype a governed assistant for tenant enquiries, document classification or management reporting using approved data only.	Use-case definition, data boundary, prompt/response tests, human approval control, risk assessment and limitations statement.

Minimum governance controls for applied projects

- Use least-privilege access and separate development/test environments from operational records.
- Do not place tenant, payment, identity or legal-document data into unapproved AI services.
- Define data owners, lawful purpose, retention, access and audit requirements before integration.
- Keep a decision log for architecture, vendors, cost assumptions, risks and accepted trade-offs.
- Test exception paths, rollback, backup and manual fallback before any production use.
- Measure benefit against a documented baseline; avoid claiming savings that have not been verified.
- Maintain sanitized portfolio versions that demonstrate capability without exposing personal or commercial data.

Portfolio publication standard

Repository / folder structure	README, business problem, scope, architecture, data model, controls, test evidence, results and lessons learned.
Evidence quality	Use screenshots, diagrams, sample/synthetic data, version history and explicit limitations.
Executive communication	One-page business summary and five-slide decision presentation for every major project.
Confidentiality	Publish only sanitized examples; operational datasets and client records remain private.

07 Development Objectives, KPIs and Review Gates

Objective	Action	Measure	Target	Status
Establish an integrated operating baseline	Map five priority processes and define authoritative data sources.	Approved maps, system register, data dictionary and baseline KPIs.	31 Aug 2026	Not started
Build cloud and automation literacy	Complete AZ-900 and PL-900 learning and practical labs.	Practice scores, learning completion and mentor validation.	31 Oct 2026	Planned
Deliver first measurable prototype	Deploy one dashboard and one controlled workflow prototype.	User test, audit trail, measured cycle-time or quality improvement.	30 Nov 2026	Planned
Validate transformation leadership	Produce pilot charter, business case, roadmap, RACI and risk register.	Executive review and documented go/no-go decision.	31 Jan 2027	Planned
Demonstrate portfolio capability	Complete four sanitized portfolio artefacts with clear evidence and retrospectives.	Mentor-reviewed portfolio and presentation pack.	31 Mar 2027	Planned
Scale the operating model	Define next-phase architecture, commercial model and adoption plan.	Approved 12-24 month roadmap and benefit forecast.	30 Jun 2027	Planned

Quarterly review gates

Review gate	Decision questions
Gate 1 - 90 days	Are the process and data baselines credible? Is the learning routine sustainable? Does the first prototype solve a real problem safely?
Gate 2 - 6 months	Has at least one workflow or dashboard created measurable value? Are cloud, automation and analytics decisions improving?
Gate 3 - 9 months	Can Alberto lead stakeholder decisions, manage risks and explain the target operating model and commercial value?
Gate 4 - 12 months	Is there enough evidence to scale the pilot, pursue advanced credentials, lead a broader transformation role or commercialise a PropTech service?

08 Risks, Constraints and Mitigation

Risk	Level	Impact	Mitigation
Transformation scope becomes too broad	High	Too many portals and workflows may delay value and exhaust the pilot budget.	Limit phase one to a representative portfolio and three measurable processes.
Fragmented or poor-quality data	High	Dashboards and automation may produce unreliable decisions.	Define source ownership, reconciliation, quality rules and exception handling first.
Low internal IT capacity	High	Configuration, support and security responsibilities may be unclear.	Use managed implementation support, documented runbooks and explicit support ownership.

Risk	Level	Impact	Mitigation
POPIA, payment and document risk	High	Personal, financial and lease data could be mishandled.	Apply privacy classification, least privilege, consent, retention, audit and approved vendors.
Tool proliferation	Medium	New tools may duplicate capability and increase cost.	Adopt an architecture decision record and reuse the existing stack where practical.
Insufficient protected development time	Medium	Learning and project work may remain incomplete.	Schedule fixed weekly blocks and review progress fortnightly.

09 Responsibilities and Immediate Next Actions

Owner	Responsibility
Alberto	Confirm role, weekly learning time, current credentials and priority business processes; sponsor access to appropriate sanitized data and stakeholders.
Assigned mentor / digital transformation advisor	Validate baseline, review architecture and automation, challenge benefit claims, guide credential sequencing and provide written feedback.
Skunkworks Academy training team	Provide learning access, schedule 30/60/90-day reviews, coordinate mentor support and maintain the IDR evidence record.
Implementation partner / technical lead	Define environments, security, integration, testing, support and production-readiness requirements.
Process owners	Validate maps, service levels, controls, exceptions, user acceptance and measured outcomes.

Immediate next actions - within 10 working days

1. Book a 60-minute IDR validation consultation with Alberto.
2. Confirm the five processes with the highest operational or financial impact.
3. Confirm available weekly development time and existing Microsoft/Google credentials.
4. Create a transformation project board with Backlog, This Month, This Week, Review and Done.
5. Complete the system/data inventory and appoint provisional data owners.
6. Select one representative pilot portfolio and agree baseline KPIs.
7. Assign a digital-transformation mentor and schedule the first three reviews.

Recommended provisional placement decision

Place Alberto in a Skunkworks Academy Digital Operations and Process Optimisation pathway. Use the property-transformation pilot as the applied learning environment. Progression to advanced product, AI or architecture work should depend on evidence from the first 90-day baseline and prototype.

10 Pathway Validation and Reference Basis

The credential sequence was checked against current official vendor guidance. Microsoft Azure Fundamentals remains a beginner credential for cloud concepts, Azure services, management and governance. Power Platform Fundamentals covers low-code business solutions, Dataverse/connectors and Power Automate. The current Azure AI Fundamentals route uses AI-901

after AI-900 retired on 30 June 2026. Google Cloud Digital Leader remains focused on digital transformation, data, AI, infrastructure, security and operations.

1. [Microsoft Certified: Azure Fundamentals](#)
2. [Microsoft Certified: Power Platform Fundamentals](#)
3. [Exam AI-901: Microsoft Azure AI Fundamentals](#)
4. [Google Cloud Digital Leader](#)

Source record

Primary internal evidence: previously documented Career Growth and Learning Programme record for participant 31, identifying a digital-factory and process-optimisation pathway; and the Skunkworks Academy property-transformation discovery capability profile covering tools, data readiness, delivery preference, pilot interfaces and budget.

11 Review and Sign-Off

Role	Name	Signature	Date
Participant	Alberto Antonio Carvalho Cabral Adao	_____	_____
Mentor / advisor		_____	_____
Career consultant		_____	_____
Training coordinator		_____	_____

Review cycle

Formal review at 30, 60 and 90 days, then quarterly. Update objectives, credentials, targets and project scope when evidence or business priorities change.
